Services V2 for Tasks Tool Product Requirement

Target Release	2.0
Component	Services
Document Status	Final
Developers	Viana Carla C. Calaminos
Release Candidate	August 26, 2016
Release date	August 31, 2016
Participants	Viana Carla C. Calaminos, Jahzeel P. Ramos, Marko Karkkainen

I. Background

There are times that some tasks of a study require to be done by a different team or service provider. Owners of the study request the service of these team to carry out the tasks.

II. Goals

Users should be able to create service requests to other teams/service providers in a form of a task record. A simple UI should be created which can be used to create a service request for one or more operational studies.

III. JIRA

Services V2 Fix Version

Workflow for creating service request:

- Entry points are in services browser.
    - Add Create button
    - Action -> Create request.
- User should be able to select from a list of services
- User should be able to select one or more studies by providing basic filters such as location, year, and season of the study
- User should be redirected to a preview and confirmation page so that she/he can ensure the correctness of the data to be submitted
- A status variable should be added in every created "service" as a task with status values as:

- New
- Accepted
- In progress
- Done
- An email notification system is a nice to have feature for this release.
